

Front-end Assignment

Implementation Team inSided

Petra Houtkamp

Version: 1.5

February 2016

Introduction

This assignment was done by almost all our front enders to give us a good insight on your skills and competencies. It will be the base for a benchmark and determine if your skills are a good fit for inSided and its customer portfolio.

You have received a Zipfile with this document, a PNG and a PSD file.
In case you have any questions, please contact us per Skype:

Team Lead Implementation: Petra Houtkamp
Skype name: petra.houtkamp

Tech Lead Implementation: Anne Ties van Vliet
Skype name: anneties

Process

Please perform the assignment. We expect you to send this back before Monday morning **29.02** before **13:00**. Your assignment will be reviewed by our team and we will send you back our feedback.

Please deliver the assignment on Git and send us the repository.

Based on the results of the review we will decide if we continue the hiring process. If so, you will be invited to inSided HQ in Amsterdam for a technical session and an interview session. After those two sessions we will inform you if we see a match.

Assignment

'Slice' the page *pixel perfect* in HTML5/CSS3. Make it responsive as much as possible. The navigation at the top and on the left are not part of the assignment (although you can always show us what you can do!).

Not all parts have to be working functionally. Below you will find a corresponding description per number (see the white numbers in the red dots):

1. The advanced filter starts with 1 row in which you can choose a certain filter. Only if you choose a filter from the first drop down the 2nd field becomes active.
2. First drop down: choose registration date and user group. Second dropdown if there is a registration date chosen: dropdown with before, after and on. Third drop down: calendar to pick a date.
3. Click on add row, a new row appears (same as the first row). First drop down: choose between before, after and on. Second dropdown: if there is a user group chosen: multiselect dropdown in which you can pick 1 or more options + two links at the top with which you can select all fields or deselect them.

PLEASE NOTE: the red cross appears whenever you have selected all fields in a row. By pressing the red cross the row is deleted again.

4. Checkboxes: static
5. Update button: static
6. Cancel link: static
7. For each selected filter (row) a tag button is created. When you click the tag button, the row is deleted. When you click on 'clear selection' all filters are removed all at once.
8. Check/unchecking the table header "Username" should check/uncheck all items
9. The username and the 'window' icons are href's.
10. These dropdowns appear as soon as you select a row from the table and disappear when you have none selected.
